In this paper, we would like to introduce the 'MAGDAS Data Archive System', which is located at the Space Environment Research Center (SERC) on the Hakozaki Campus of Kyushu University in Fukuoka, Japan.

This system allows the outside world to access the data that has been created by MAGDAS since the start of 2005. Nearly half of MAGDAS units (50 units total) have been installed globally to date. The data comes from the field in realtime via the Internet.

With prior arrangement with SERC, anyone can access the global 1-minute data. Regional 1-second data is also available, but only to privileged users (users who are hosts to MAGDAS installations in various parts of the world).

This data is Japan's primary contribution to next year's IHY international event.
